

Title

Problem Statement – SB Stocks

Introduction

The stock market provides various investment opportunities, but understanding stock trading can be challenging for beginners.

New users often lack practical experience in buying and selling stocks, managing portfolios, analyzing historical market trends, and evaluating investment performance.

Practicing directly in real financial markets involves the possibility of financial loss.

Problem Statement

Beginners and aspiring investors lack a simple and risk-free platform where they can practically understand stock trading, manage virtual portfolios, analyze historical stock data, and test basic trading strategies without investing real money.

Many existing stock market applications primarily focus on real-money trading. These platforms may be complex for beginners and are designed for actual investment activities.

Users require an educational simulation environment that represents basic stock trading operations while eliminating financial risk.

Key Problems Identified

1. Lack of practical stock market experience among beginners.
2. Financial risk associated with learning through real-money trading.
3. Difficulty understanding buy and sell transactions.
4. Limited understanding of portfolio management.
5. Difficulty analyzing stock price trends.
6. Lack of awareness regarding portfolio profit and loss.
7. Difficulty evaluating trading strategies using historical data.
8. Lack of a centralized system to monitor virtual trading activities.

Proposed Problem Resolution

SB Stocks addresses these problems by providing a virtual stock trading platform.

Users receive virtual funds and can simulate stock transactions.

The platform allows users to:

- Register and login securely.
- Browse available stocks.
- Search stocks.
- View stock details.
- Analyze historical stock data.
- Create multiple virtual portfolios.
- Buy stocks using virtual funds.
- Sell owned stocks.
- Monitor portfolio holdings.
- Calculate portfolio profit and loss.
- View transaction history.
- Analyze basic trading strategies.

Expected Impact

The proposed platform provides users with practical exposure to stock trading concepts without involving real money.

It creates an interactive learning environment where users can understand market behavior, portfolio management, and trading activities through simulation.

Conclusion

SB Stocks solves the problem of limited practical stock trading experience by providing a secure, structured, and risk-free paper trading environment.
